 TITLE : MULTICOLOR PROOF READING
 DEVICE

ABSTRACT : PURPOSE: To improve the workability by facilitating the handling of a roll sheet.

CONSTITUTION: A multicolor proof reading device 1 obtains a multicolor printing sample by transferring ink to a receiver sheet from a plurality of donor sheets according to image information. The device 1 is equipped with a revolver part 5, an image forming part 6, a supply part 7, and a discharge part 8. The revolver part 5 has an insertion opening 15 for inserting a roll like donor sheet and a receiver sheet in its diameter direction, and stores the sheet inserted from the insertion opening 15. The image forming part 6 forms the multicolor printing sample from the donor sheet and the receiver sheet. The supply part 7 supplies the donor sheet and receiver sheet which are stored in the revolver part 5 to the image forming part 6 while developing them. The discharge part 8 has a front to rear switching claw 72 for switching discharge direction to the front- rear direction, and discharge the sheet selectively to the front or the rear direction of the device.
